

Welcome!

Thank you for your interest in Concast Metal Products Co.

Our commitment to our customers—like you—is founded on a simple principle: **Proven Integrity. Delivering Value.** This mission is at the heart of our business.

At Concast, we trace our beginning back to 1891 when we began the production of brass and bronze ingot in Pittsburgh, Pa. Since 1960, Concast has been producing continuous-cast products. This 57-year history has firmly established our high standard of excellence.

Today, Concast is the largest manufacturer of continuous-cast copper alloys in North America with two production facilities located in Mars, Pa., and Birmingham, Ohio. Our excellent reputation is built upon strength and stability.

We are a manufacturer of specialty continuous-cast copper alloys. Our primary focus is the production of standard-stocked copper alloys in bars, rods, tubes, and rectangles, as well as custom alloys. All products are produced with state-of-the-art horizontal and vertical continuous-casting technology.

Since 1993, Concast has also been the leader in lead-free replacement alloys. These regulatory-compliant GreenAlloys™ are free of the elements that threaten health and the environment, yet still perform in the manner for which they are intended.

We maintain more than 1,000 standard product sizes in our warehouse, the largest inventory of copper alloys in North America. Every product in our warehouse is available for immediate shipment.

We take pride in what we do, with an emphasis on evolving technologies, quality control, and a high level of customer service. Our sales team would be happy to quote on any special size, shape, alloy requirement, or rush need that you may have.

Please call us anytime for additional information. You can also visit our website at www.concast.com.

Best regards,

Martin Little
